In the first part of this two part series on inductance calculation techniques, classical methods are developed for solving for the inductance of structures in closed-form.

Numerical Methods for Inductance Calculation

As a result, most of the complex formulae were put into table form in order to make hand calculation easier. I wanted to use a spreadsheet to do the calculations, and so I began to research the literature to find the original formulae from which these tables were derived. Some of them were given explicitly in Grover's book, while some others required a lot more digging. Many of the underlying formulae were series expansions of elliptic integral formulae or other similarly intractable formulae.

Numerical Methods for Inductance Calculation

The formula as written does not look overly complicated, except that we haven't discussed the calculation of the elliptic integrals yet, and this is where things can get a bit messy. In the past, this formula has been considered impractical to calculate due to E and K , and scientists have gone to great lengths to simplify the formula in order to eliminate their calculation.

Solenoid inductance impedance calculation

The main point to note is that for coils MKG1-4, low-frequency (L0) inductances calculated using the modified National Bureau of Standards (NBS) method (i.e., the method used here) are in exact agreement with the method used in ref. [11], and that for a measurement frequency of 1 kHz, the internal inductance is the same as the DC value. This provides a vindication, not of the NBS method

which is not in doubt, but of the formula verification procedures applied here. The calculation of ref.

Computerized Calculation of Leakage Inductance Values of

Leakage inductance calculation is a complex procedure which can be very time consuming. Therefore, the algorithms of both methods have been implemented into a Matlab R based calculation program.
